Digital Literacy

- **Name:** Vanshika Rana
- **Reg.no.:** 25MEI10084
- **Branch:** Integrated Mtech Cyber Security
- **Course:** CSE0001-Digital Literacy

Introduction

Digital literacy has transitioned from a specialized skill to a fundamental necessity in the modern era, as technology is now deeply integrated into nearly every aspect of daily life. As a Student Digital Ambassador, I undertook a comprehensive project designed to cultivate a professional online presence, master essential digital tools, and navigate the internet securely. This journey involved a series of diverse practical tasks, such as creating an informative digital literacy infographic to simplify complex concepts and building a robust professional portfolio using platforms like GitHub, LinkedIn, and Kaggle.

The project also expanded into technical and communication skills, where I explored coding challenges on HackerRank, developed data collection tools through Google Forms, and practiced professional email etiquette for both academic and career-related scenarios. Additionally, I gained critical insights into cybercrime awareness by studying the mechanics of UPI and online payment fraud to promote safer internet practices. Ultimately, this project has been highly beneficial, significantly improving my understanding of digital communication and providing me with the confidence to apply these skills effectively in my future academic and professional endeavors.

Task 1: Digital Literacy Infographic

I made a digital literacy infographic with a tool I found online. This digital literacy infographic is about what digital literacy means. It has some tools for students and it has safe internet practices. I made it look nice and simple so it is easy to understand. I used headings and icons to make the digital literacy infographic easy to read.

One cool thing about this task was figuring out how to show information in pictures of writing a lot of words. It helped me be more creative. It helped my design skills. At first it was a little hard to get everything on one page. It got easier when I organized it better. This task helped me see how important it is to use pictures and things to share information in a way that people can understand. The digital literacy infographic was a way to learn about digital literacy and how to share information in a visual way.

Task 2: Digital Portfolio

In this task I made my digital portfolio using GitHub, Linkedin and Kaggle. GitHub helps to show coding projects and technical work. LinkedIn is for networking and career opportunities.I made my GitHub profile. Added a README file. It describes my learning goals and my interests.

Task 3: Coding & Collaboration Platforms

- For this task I looked into HackerRank and Google Forms. HackerRank did a coding problem for beginners. It helped me get the hang of solving problems and understand how coding websites work. In the part I made a quiz with five questions on Google Forms. The quiz was about being safe and knowing your way around digital tools.
- Students can take this quiz to see how much they know about using the internet and using digital tools.I also looked at the answers, in Google Sheets. These platforms will help me in school. They will help me get better at coding. They will also help me work with others and collect data easily. This task gave me a chance to try out tools that are really useful.

Task 4: Email Etiquette & Communication

- In this task I learned about writing emails and online communication. I made two emails. One asking for time to do an assignment and another applying for a job. Both emails had a subject line, a friendly greeting, a clear message and a proper closing. I also made a list of media dos and don'ts for good online behavior. Bad communication can cause problems in school and at work.
- Using words being polite and formatting properly is crucial. This task helped me see why good communication matters and how to show myself online. It taught me to be careful with my words and actions, on the internet and social media. Good communication helps avoid misunderstandings.

Task 5: Cybercrime Awareness

- I looked at UPI and Online Payment Fraud for this task, which's a pretty common kind of cybercrime. I found out that people who do this try to trick others into sharing information by using fake emails and websites. I made a list of things to do to prevent this from happening with some tips on how to stay safe.
- I was really surprised to see how easy it is for people to get caught by these scams. A lot of people click on links they do not know without checking them. One thing I will do differently now is be more careful before I click on any link or share information on the internet.
- This task really helped me understand how important it is to be safe and it taught me how to be more careful when I am using the internet and things, like frauds, are around. I learned more about UPI and Online Payment Fraud and how to avoid UPI and Online Payment Fraud.

Conclusion

Overall this project helped me understand how important it is to be good with stuff, in today's life. I learned how to use tools to talk professionally online and stay safe on the internet. Each task gave me knowledge that will help me with school and my future job. This project also made me more confident when using platforms. I will keep using these skills in the future.
